

SMART EYEWEAR ON THE SHOP FLOOR

CLIENT STORY

Eighteen months ago, AGCO Corporation found the solution for the technology gap on the manufacturing floor to support the rapid decision-making, transaction processing and overall information needs its production environment demands. Now that emerging technologies like Google Glass have proven the value of checklists in wearable format, we are moving to interface our solutions with ERP systems, like SAP, to drive even more rapid and automated decisions within the business.

AGCO is now configuring its standard work instructions and operating management systems for **Proceedix on Google Glass**. When implemented, this will give AGCO a number of new leading-edge capabilities on the production floor, including real time training, quality gate issue trending, and pushing visual management to all users through beacons, trends and thresholds.

AGCO Corporation is the global leader in the design, manufacturing and distribution of agricultural solutions for the world. Our well-known brands, some through international acquisition, including Challenger®, Fendt®, GSI®, Massey Ferguson® and Valtra® deliver advanced technology to farmers worldwide.

Proceedix is a Software as a Service-based central platform for managing enterprise procedures and instructions in an easy and agile way, while making remote execution paperless and mobile.
